

Nov 10,2020 - Nov 17,2020	Report
Recap	• Team Meeting • Ethics Presentations
Achievements	• Presented Ethics Presentation • Connected mini boards together - Each board has a button that represents a letter - Letters A, B, and C • Completed Arduino code for testing • Completed Python code for testing • Completed finding sample mp3 files • Tested code to display images based on specific button pressed
Problems Encountered	• Holographic Environment - The height → needs to be taller (no more than 3.5 inches) ▪ the entire environment, not just the single side • Testing buttons - Code to display images from button not working - Old code worked, but not with new code • Wirings on mini boards need to be set in place • Power supply - Needs minimum 5V/4A to power product properly - Possible increase in needed power due to longer connections of alphabet buttons • Audio - Wav files are too low quality for Pygame - Sounds are coming through but it is very bad quality and delayed - Original speakers are not enough to give full volume on audio ▪ needs a speaker with USB and AUX
Future Plans	• Create Test Plan Document and give presentation • Continue on with project goal of connecting multiple working buttons to display different letter images - Buttons for A, B, and C display correct letter images - Need to complete letters D - Z • Connect correct speakers to Pi • Complete Learning Mode for toy • Create game(s) for Quiz Mode • Create images for toy - Alien - Quiz Option Menu
