

Oct 27,2020 - Nov 3,2020	Report
Recap	• Ethics Presentation • Team Meeting
Achievements	• Ethics Presentations • Downloaded Arduino IDE correctly • Tested new images for display quality • Established communication between Arduino and Pi ◦ Displayed “Hello from Arduino” • Able to display full screen image of Sample letter A from Python • Created Button_Test code ◦ Specific image to display from specific button • Discussed about connecting power issues • Found correct image size to produce highest quality image
Problems Encountered	• Quality of images ◦ The thickness of plastic environment matters (thicker plastic can distort image) ◦ Rotation on letters needs to be fixed. “B” is backwards ◦ The actual image size needs to be full screen while only the holographic images should be centered ▪ Display size: 1280x800 ▪ Image sizes: 700x700 • Powering Pi, Arduino, and Display • Creating a single Power Button for Pi, Arduino, and Display ◦ Extreme problem ◦ Risk(s): ▪ Too much power ▪ Power leakage ▪ Incorrect power distribution ▪ Incorrect hardware connections ▪ Possible negative effects of hardware failure
Future Plans	• Prepare/present Ethics Presentation • Connect portable power to Arduino, Pi, and Display • Connect Arduino, Pi, and Display to a single Power On point • Trial and error for creating a Power Button • Complete Goal: ◦ Create Power On/Power Off button and Display and image from pressing a button
