

Oct 20,2020 - Oct 27,2020	Report
Recap	• Ethics Presentation assigned • Team Meeting
Achievements	• Each team member was assigned an Ethics Presentation chapter • Created model for buttons • Created model for board slots • Transferred sample images over to Raspberry Pi • Created holographic environment and tested holographic images - Letter image - Text image • Skeleton code for main function - Main method to implement Learning Mode and Quiz Mode • Skeleton code for Learning Mode and Quiz Mode - Letter, word, and quiz • Created a holographic image of the letter "A"
Problems Encountered	• Quality of images - Larger text needed for higher quality • Main method - Should stay in learning mode in a loop. ▪ should wait for an input ▪ if letter input, play it. ▪ if "switch mode input", start that via a function call. - In quiz mode ▪ whenever waiting for inputs, also listen for "switch back" to learning • Arduino connection to Raspberry Pi - How to program in Arduino language - Checking communication
Future Plans	• Prepare/present Ethics Presentation • Create model for Power Button • Connect a Power On/Power Off button • Code for Power Button - Turn on after being held for 3 seconds • Test communication between Arduino and Raspberry Pi • Connect a single push button to Arduino and Raspberry Pi - Button will represent a single letter - Will display a specific letter image • Create multiple test images for hologram - In order to find the perfect size that will display highest quality image
